Office Action Summary

Application No.

09/937,724

Applicant(s)

AUBRY ET AL.

Examiner

Elvis O. Price

Art Unit

1621

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 15 April 2004 and 16 April 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 12-16 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 12-16 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- ☐ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____.
- ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: _____.

DETAILED ACTION

1. Claims 12-16 are pending in the application.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 12-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Barton et al. {J. Chem. Soc., Perkin Transactions 1, 1975, pp. 1610-1614}.

Applicants claim, in brief, a process for the oxidation of organic substrates by means of singlet oxygen, which consists of adding 40-60% strength hydrogen peroxide to hydrophobic organic substrates which react with singlet oxygen in a monohydric C1-C8 alcohol as a solvent in the presence of 5-25 mol% of a homogeneous molybdate catalyst, whereupon hydrogen peroxide is catalytically decomposed to give water and singlet oxygen, oxidizing said substrate to the corresponding oxidation products with precipitation of the catalyst, removing said precipitated catalyst by centrifugation or filtration and recycling said catalyst to said oxidation.

Barton et al. teach a process for the oxidation of a hydrophobic organic substrate which consists of adding a homogeneous molybdate (ammonium or sodium molybdate)-hydrogen peroxide catalyst (30% peroxide was used to make the catalyst) to the substrate(s) in the presence of a monohydric C1-C8 solvent such as tertiary butanol (see pg. 1612, second column, experimental section). The difference between the

Art Unit: 1621

presently claimed invention and what is taught by the Barton et al. reference is that Barton et al. are silent about the oxidative reaction taking place by means of singlet oxygen, using 40 to 60% strength hydrogen peroxide and silent about the reaction temperature and the recycling of the catalyst. However, since the Barton et al. disclosure is primarily concerned with the singlet oxidation of phenols it would not have been unreasonable for one having ordinary skill in the art to expect that the said oxidative reaction taught by Barton et al. proceeds via singlet oxygen oxidation (see 1st paragraph of page 1612). Since applicants have originally disclosed a range of hydrogen peroxide strength of from 30–70% (see page 6 of present specification and original claims), implies that the oxidation takes place as low as 30% strength peroxide and although Barton et al. only exemplify the oxidation of the organic substrates using 30% strength hydrogen peroxide, it would have been within the expertise of one having ordinary skill in the art to optimize the strength of the hydrogen peroxide to fall within the presently claimed hydrogen peroxide strength range. Additionally, one of ordinary skill in the art would have expected that the reaction temperature of the Barton et al. oxidation process was room temperature since Barton et al. were silent about the reaction temperature and recycling of the same material catalysts taught by Barton et al. would be an obvious procedure to one having ordinary skill in the art, absent any unexpected results.

Thus, it would have been *prima facie* obvious to one having ordinary skill in the art to arrive at the presently claimed invention, because Barton et al. teach an oxidation process which consist of adding at least 30% hydrogen peroxide to hydrophobic organic

substrates in an organic solvent in the presence of a homogeneous catalyst (ammonium molybdate or sodium molybdate).

One having ordinary skill in the art would have been motivated to oxidize organic substrates as presently claimed, in view of the teachings of the Barton et al. reference, by using the molybdate-hydrogen peroxide homogeneous catalyst taught by Barton et al., so as to arrive at alternative means, depending on cost and availability of the said catalyst system, for oxidizing hydrophobic organic substrates. One having ordinary skill in the art would have been motivated to arrive at the optimum results by optimizing all reaction parameters such as strength of hydrogen peroxide used, mole percent of all reactants/reagents, etc.

Response to Arguments

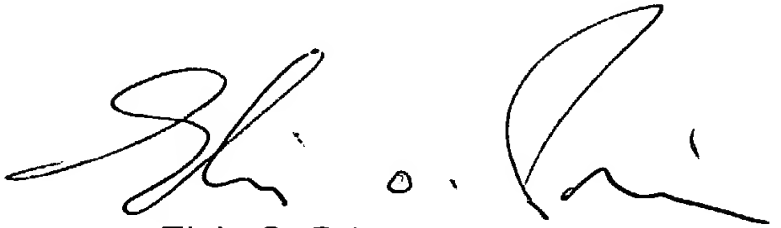

Applicants' arguments filed 4/15/04 and 4/16/04 have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elvis O. Price whose telephone number is 571 272-0644. The examiner can normally be reached on 8:30 am to 5:00 pm; Mon-Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Johann R. Richter can be reached on 571 272-0646. The fax phone numbers for the organization where this application or proceeding is assigned is 703 872-9306.

Art Unit: 1621

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703 308-1235.
